Olivir™ Olive Leaf P.E

GCI Item #	Product Name
5800	Olivir 6% Oleuropein
5805	Olivir 15% Oleuropein

Description

Throughout history, the utilization of the olive fruit and its oil has overshadowed the use of the rest of the olive tree. But recent research indicates that the olive leaf may be a rising healing star.

Scientists isolated a bitter substance from the leaf and named it oleuropein. It was found to be one ingredient in a compound produced by the olive tree that makes it particularly robust and resistant against insect and bacterial damage. Oleuropein is an iridoid, a structural class of chemical compounds found in plants.

Studies have shown that this active ingredient is responsible for the numerous health benefits of olive leaf extract. Oleuropein is a powerful antioxidant which boosts the immune system, allowing the body to destroy free radicals and harmful viruses, bacteria and other potentially dangerous cells. The benefits of olive leaf extract to the immune system are well documented - it is very well known as a non-toxic, potent immunity enhancer.

In addition, researchers have found it could also inhibit oxidation of low-density lipoproteins (the so-called "bad cholesterol") and increase blood flow in the coronary arteries.

Benefits:

- Promotes cardiovascular health
- Supports the immune system
- Improves overall energy level

Applications

- Dietary supplements

Why Olivir™ Olive Leaf Extract is better

- Guaranteed potency and purity
